

# HarryG COVID-19 Dashboard

Page 1

Daily Cases			<b>RSA COVID-19 DASHBOARD</b> <b>29 March 2021</b>	Daily Still in Hospitals	% of Reported Cum Cases who Died (CFR)	Vaccinations:			
Cum +Cases	548	↓		4971	3,63%	→	Total	Yesterday	Avg
Still Active +Cases	Cum Cases p mill PoP	Cum Deaths p mill PoP			% of RSA PoP who have died to date:	Reported	Incl Excess		
17 187	26 067	947				0,095%	0,190%		
Deaths Avg Age	Deaths Min Age	Deaths Max Age		56 147	Daily				
62,2	0,2	105		71					
				Cases	Deaths	CFR	Median Age	Cum Recoveries:	
				57,8%	52,1%	3,04%	58,8	1 472 645	95,3%
				42,2%	47,9%	3,83%			

An R<sub>0</sub> below 1 suggests that the number of cases is shrinking, possibly allowing societies to open back up. An R<sub>0</sub> above 1 indicates that the number of cases is growing, perhaps necessitating renewed lockdowns or other measures.

World Deaths (CFR), Recoveries (RR) and still-Active Cases as % of all Cases

## Avg "normal" DAILY WORLD Mortalities v COVID: Reported Daily Deaths (Linear Scales)

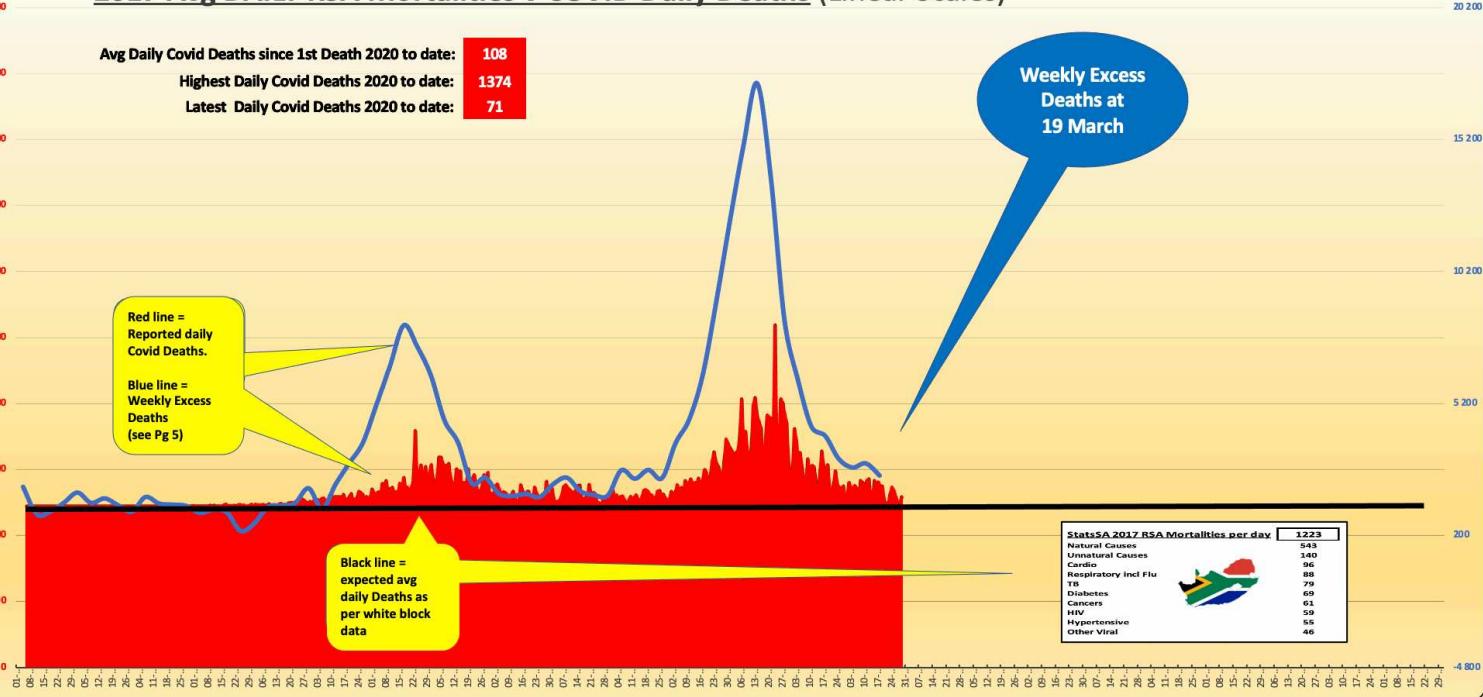

The two graphs WORLD (above) and RSA (below) attempt to put the number of Covid Deaths into some sort of perspective graphically.

The big RED blocks are TOTAL Avg Deaths from ALL causes over a full calendar year.

The RED area/lines on top of the red blocks are the INCREMENTAL Actual Daily Deaths due to Covid as officially reported.

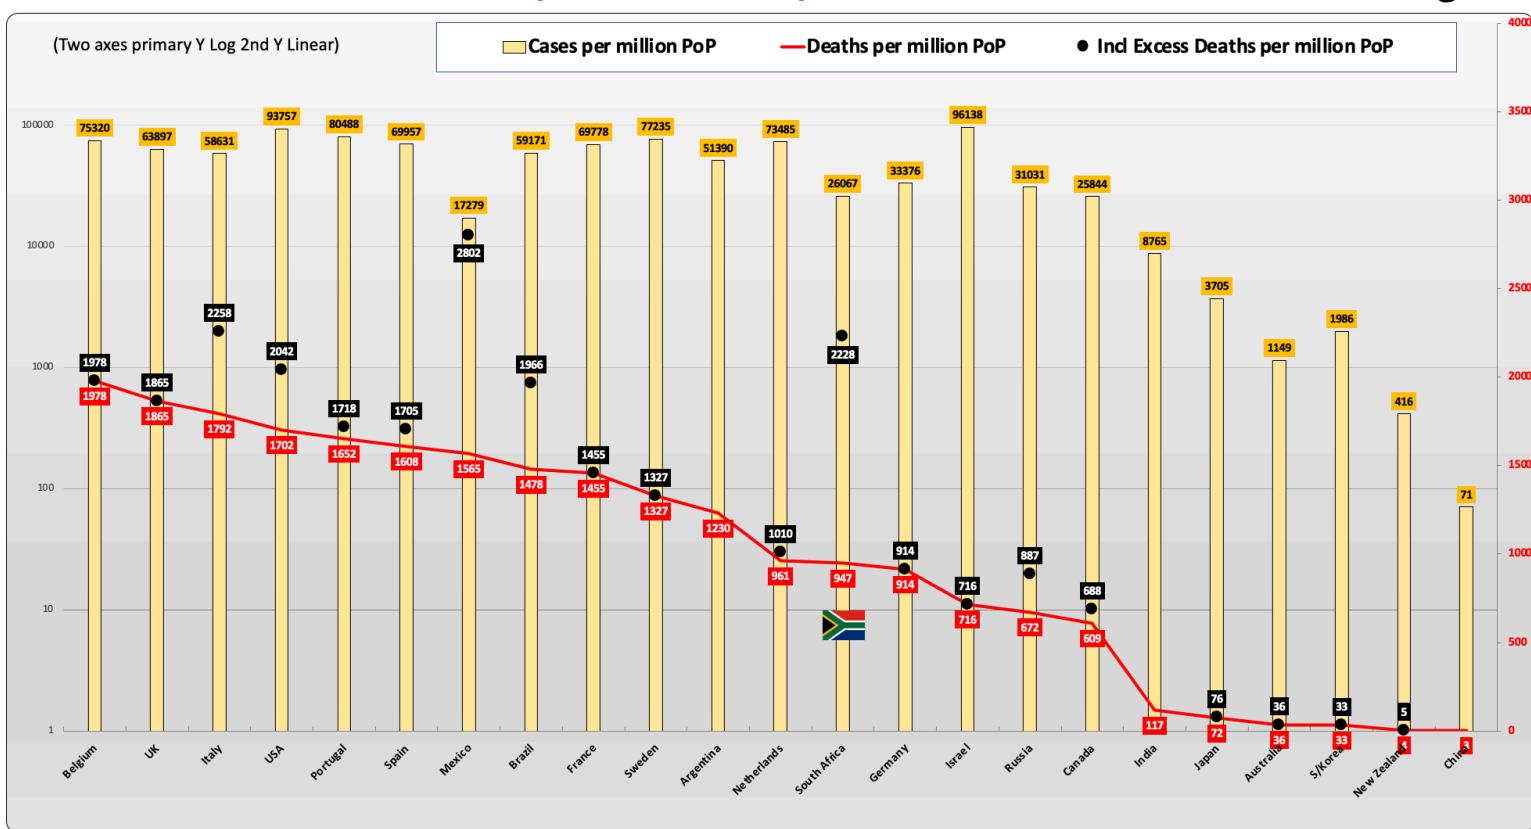

The BLUE line in the bottom RSA graph shows the SAMRC Excess Deaths weekly numbers.

## RSA Excess Deaths as per SA Medical Research Council

Data as at:

19 March 2021

Page 5

One approach to aid understanding of the emerging COVID-19 mortality is to compare the estimated weekly excess deaths with the number of COVID-19 deaths reported by the Minister of Health as shown in the figure below. This comparison is hampered to some degree by the fact that the excess deaths are classified by week in which the death occurred; the reported COVID-19 deaths are classified by date the numbers are reported to the Department. If all excess natural deaths were due to COVID-19, and all COVID-19 deaths were perfectly identified and reported, the two series would be identical. The number of estimated excess deaths has begun to decrease, consistent with the trend in the number of confirmed COVID-19 deaths. Although more data are needed on the underlying causes of death, this observation is strongly supportive that a significant proportion of the current excess mortality being observed in South Africa is likely to be attributable to COVID-19.

The red lines are weekly Covid deaths as reported by Dept of Health.  
 The blue lines are total Natural Deaths as reported by Dept of Home Affairs.  
 The gaps are the socalled "Excess Deaths" which can largely be ascribed to Covid, directly (home/rural deaths) and indirectly (limited access to hospitals due to fear of Covid or no space).

## Vaccination Data

### Selected countries who publish their VAC data :

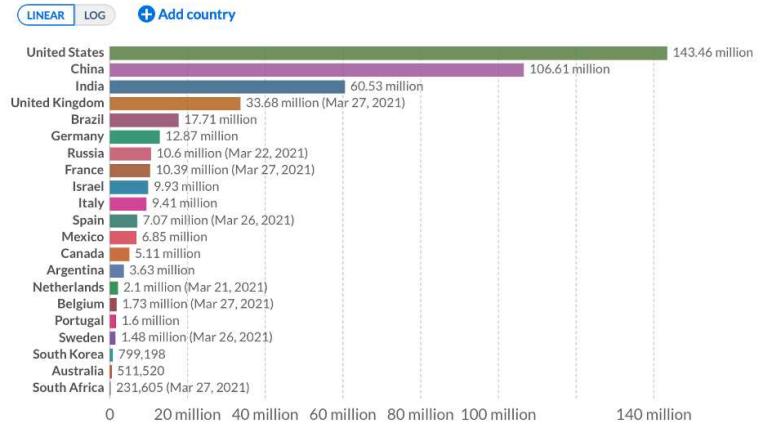

COVID-19 vaccine doses administered per 100 people, Mar 28, 2021

Total number of vaccination doses administered per 100 people in the total population. This is counted as a single dose, and may not equal the total number of people vaccinated, depending on the specific dose regime (e.g. people receive multiple doses).

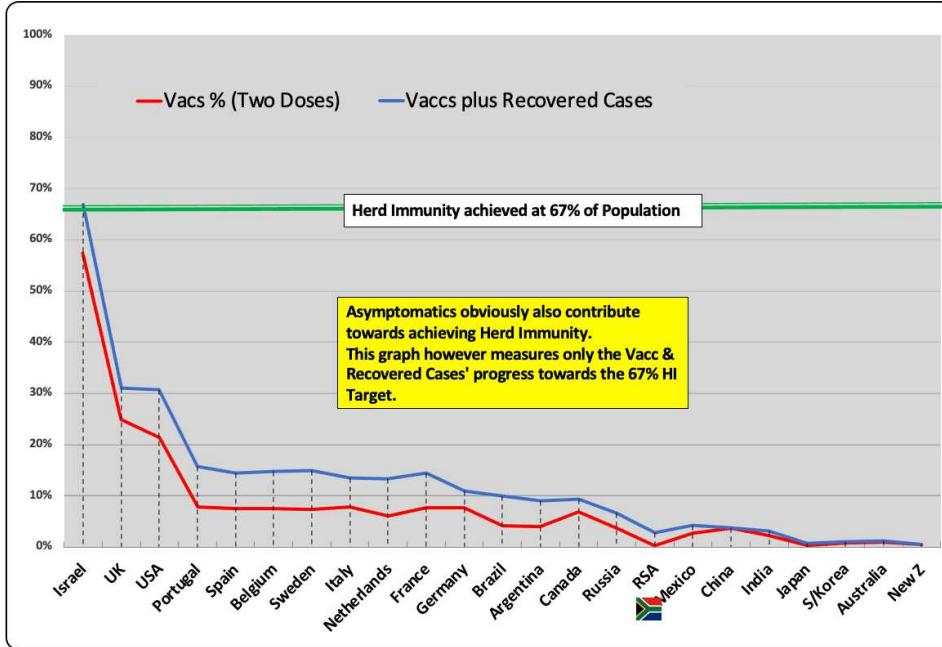

COVID-19 vaccine doses administered, Mar 28, 2021

Total number of vaccination doses administered. This is counted as a single dose, and may not equal the total number of people vaccinated, depending on the specific dose regime (e.g. people receive multiple doses).

### Selected Countries' Progress towards Herd Immunity (HI) :

**How long will it take for RSA to achieve Herd Immunity Target at current rate of Vaccination ?**

Vacs to date: 239 665 (single dose) Avg Vacs per day : 7 049

Herd Immunity Target : 35 000 000 (approx 67% of RSA PoP)

13,6 Years

Excludes the contribution to Herd Immunity by Recovered and Asymptomatic Cases.
