## RSA Excess Deaths as per SA Medical Research Council

as at: 21 May 2021

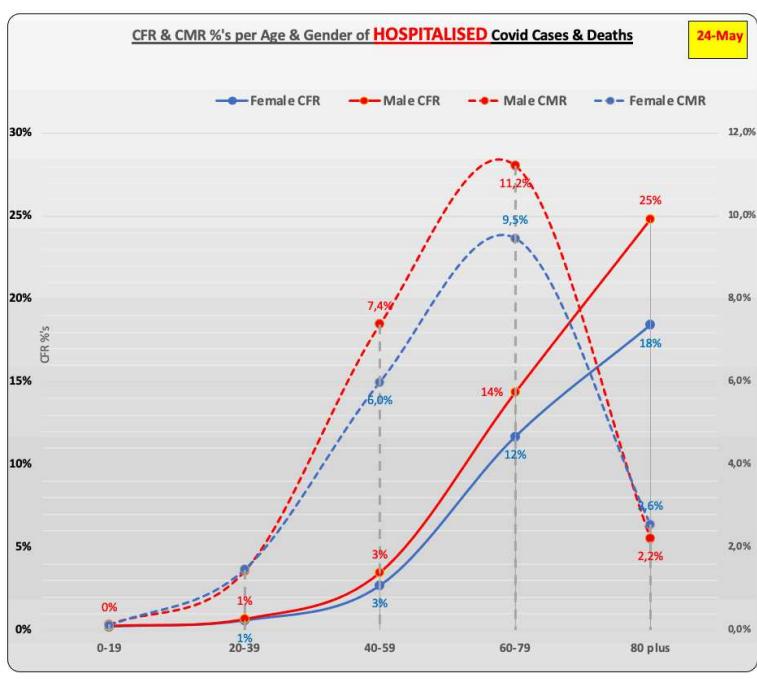

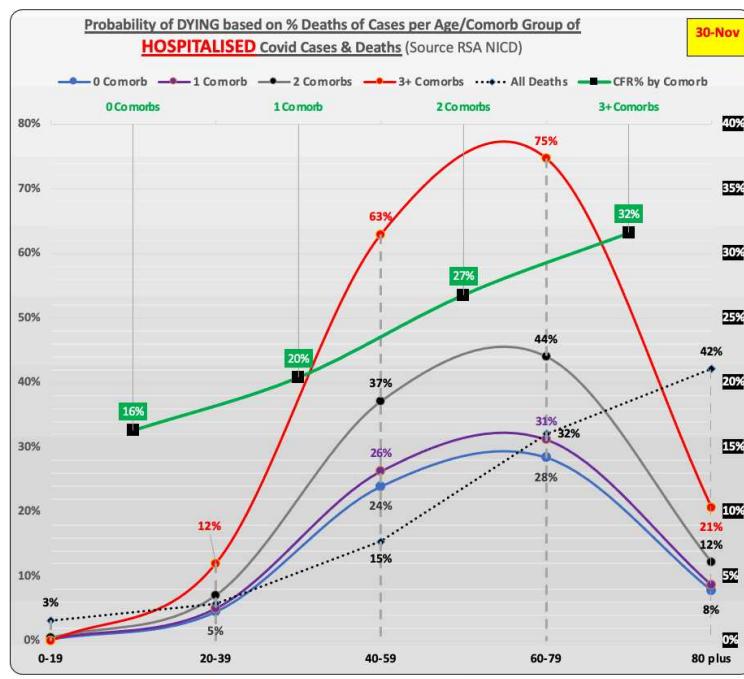

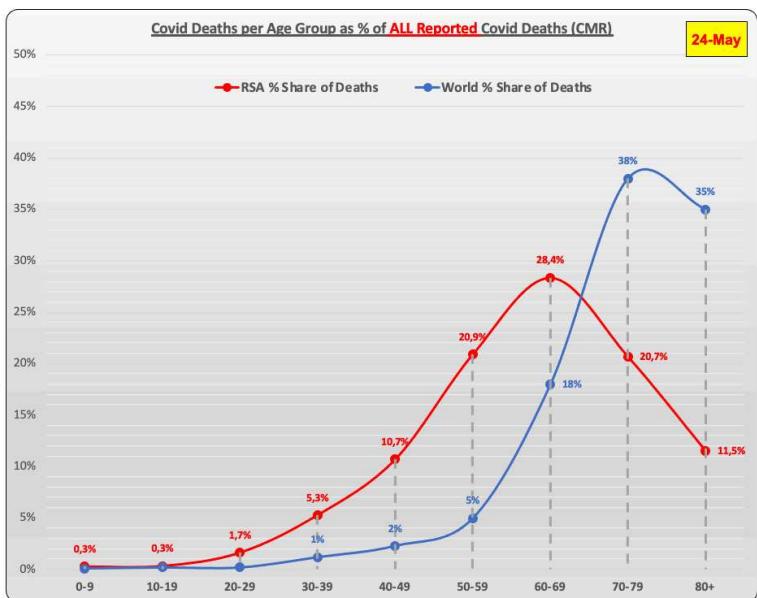

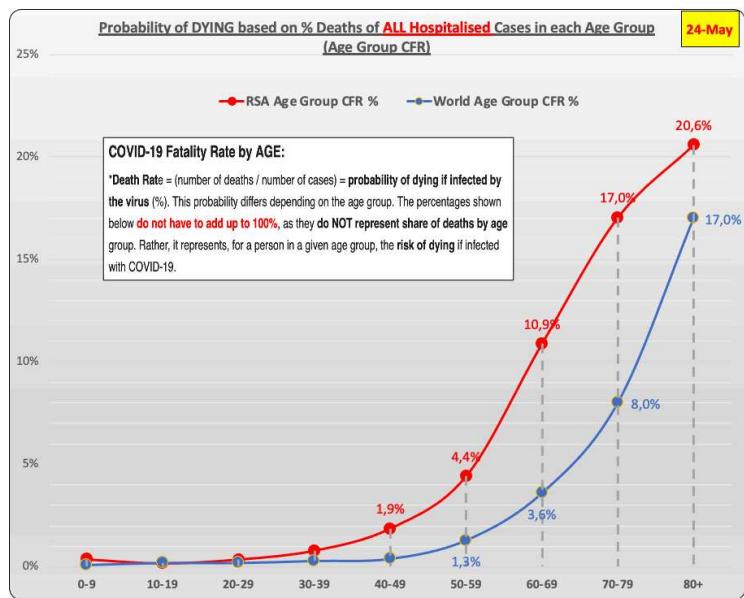

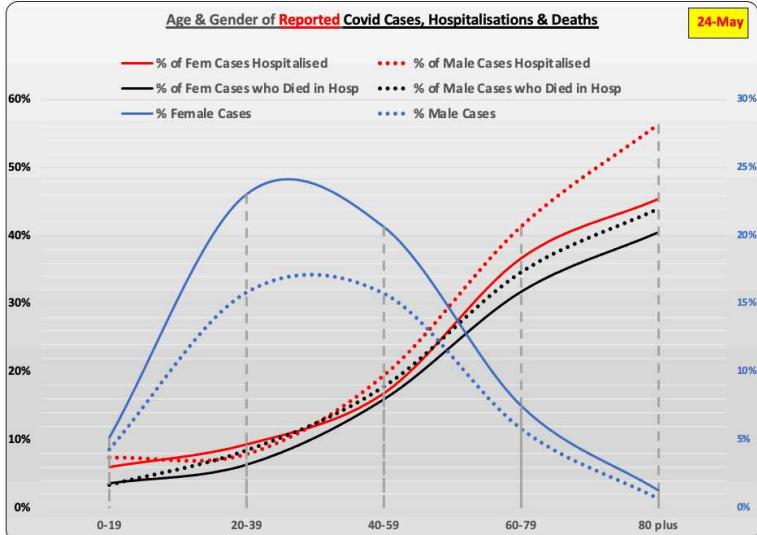

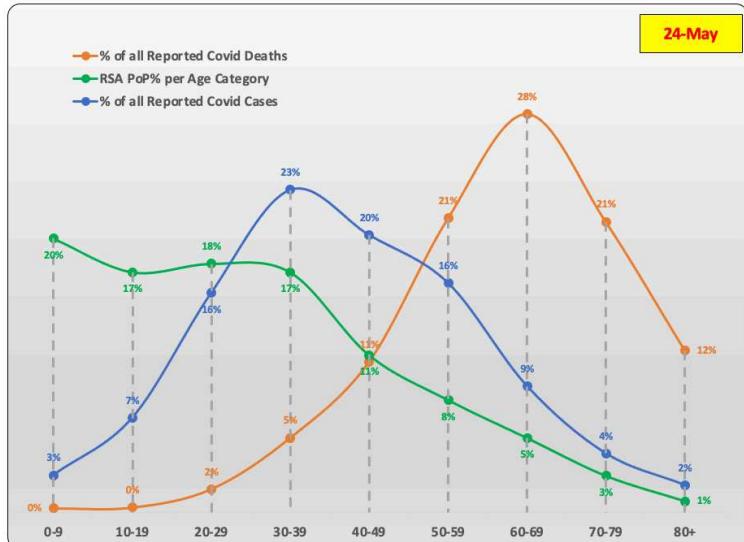

The P-Score is another measure frequently used to describe excess mortality on a weekly basis. It is the percentage change in the number of deaths from the expected number for that week. Negative values below 0% reflect a deficit in deaths while positive values reflect an increase. This graph shows the percentage change between the estimated number of deaths from natural causes and the predicted number based on the historical data.

The red lines are weekly Covid deaths as reported by Dept of Health.  
 The blue lines are total Natural Deaths as reported by Dept of Home Affairs.  
 The gaps are the socalled "Excess Deaths" which can largely be ascribed to Covid, either directly (home/rural deaths) and/or indirectly (limited access to hospitals).

# Vaccination Data

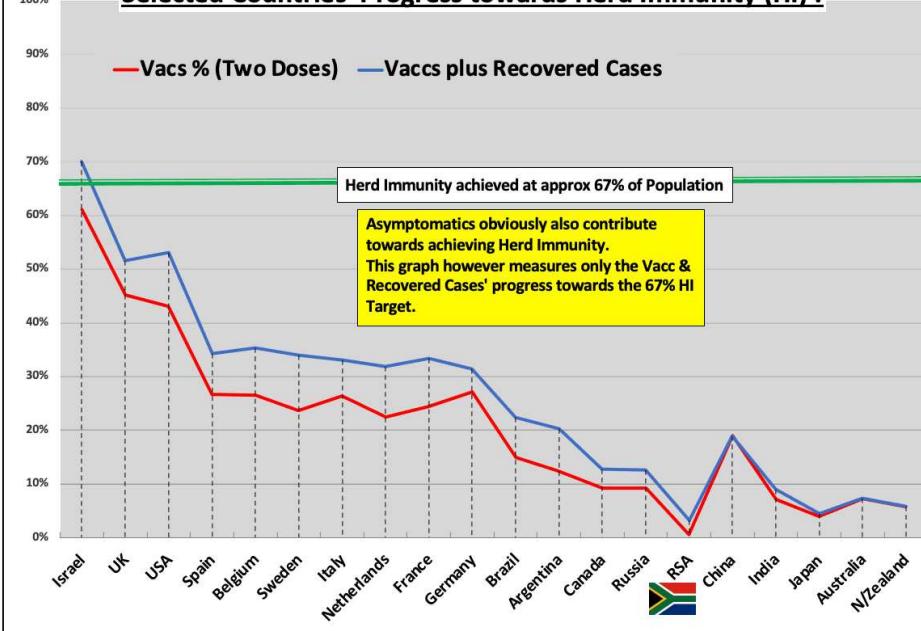

Page 6

## Selected countries who publish their VAC data : Vaccs per 100 Population (# >100 means into 2nd doses)

## Selected Countries' Progress towards Herd Immunity (HI) :

## How long will it take for RSA to achieve Herd Immunity Target at current rate of Vaccination ?

Vaccs to date: 761 903 (single dose) Avg Vaccs per day: 8 282

Herd Immunity Target : 40 400 000 approx 67% of RSA adult PoP  
Revised up by Govt from 41m to 40.4m on 7 May 2021

13,4 Years

Excludes the contribution to Herd Immunity by Recovered and Asymptomatic Cases.

# South Africa's vaccination plan

Page 6.1

Updated 7 May 2021

Pfizer BioNTech requires two doses

Johnson & Johnson requires one dose

= Sisonke Trial

= National Rollout

## VACCINATION ROLLOUT

**28 April 2021**

The Sisonke study, which uses the Johnson & Johnson vaccine, resumed after a two-week pause. The health department calls the study Phase 1A of the vaccine roll-out. By 6 May 366 101 of the 500 000 health workers in the trial had been vaccinated.

### +60 year olds and health workers

Phase 2 starts on May 17. This phase will run concurrently with Phase 1B, which will cover health workers who were not vaccinated by the Sisonke study. Phase 2 will start with people over 60, which is estimated to be a population of five million. The oldest people, who have registered on the EVDS\*, will generally get vaccinated first.

\*Go to [vaccine.enroll.gov.za](http://vaccine.enroll.gov.za) to register

### +40 year olds

From July, people over 40 will be included in Phase 2 of the vaccination roll-out, as well as people in congregate settings such as old-age homes (1.1 million people are estimated to reside in congregate settings)

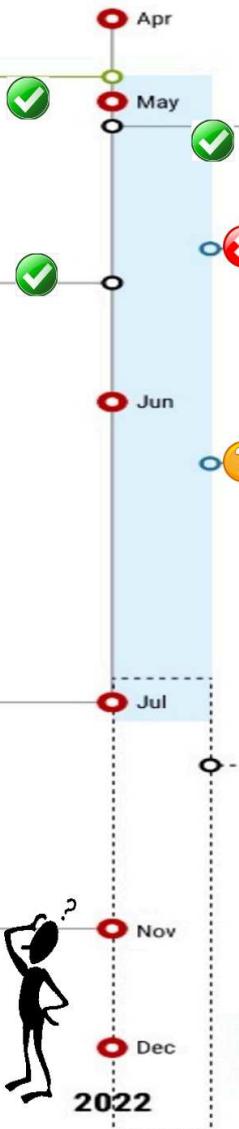

### Everyone over 18 years of age

In November, everyone else (those 18 years and older) will get their turn to get vaccinated in Phase 3 of the roll-out. This will be about 22.6 million people

### February 2022

The target, at this stage, is to have all people of 18 years and older vaccinated by February 2022. The health department says this will be up to 40.4 million people.

2021

## PLANNED VACCINE DELIVERIES

**2 May 2021 Pfizer**

The first batch of 325,260 doses of Pfizer-BioNTech vaccine arrived in South Africa. This two-shot vaccine will be used to start vaccinating the remaining 700,000 health workers not covered by the Sisonke trial, as well as people over 60.

**May to June 2021 Pfizer**

Health Minister Zweli Mkhize says 5.9 million doses from Pfizer will arrive in weekly shipments of 325,260 doses until 30 May. For the five weeks after that 636,480 doses will be delivered weekly. Another 1.4 million doses of Pfizer-BioNTech vaccine are expected from Covax.

**Mid-May to June 2021 J&J**

1.1 million paid-for Johnson & Johnson vaccines are expected to arrive in mid-May, then two deliveries of 900,000 doses each are expected by the end of June. This is dependent on when Aspen releases the jabs. The health department says the shots have been made, but can be released only once a safety verification process by international regulatory authorities has been completed. \*\*

**July to December 2021 Pfizer**

In Parliament on 28 April, Mkhize said by the end of June another 2 million doses of Pfizer-BioNTech are expected and another 8 million are expected by the end of September. The president omitted these doses in parliament on 6 May.

28.2 million Johnson & Johnson doses are expected between July and the end of the year. **J&J**

### Total Vaccines by end of 2021

**J&J** Johnson & Johnson = 31.2 million \*\*  
(mainly for use in rural districts)  
**Pfizer** Pfizer-BioNTech = 31.4 million (for use in metros)

\*\* The Health Department's presentation to Parliament 28 April stated 3 million Johnson & Johnson shots would be delivered in Q2 2021. In previous statements the department has indicated that 2.9 million shots will be delivered in that period.

This timeline is based on the most recent information available on 6 May. We will update the timelines and re-circulate them when the information changes.
